

## SYNTAXONOMY OF HYGROPHILOUS WOODS OF THE ALNO-QUERCION ROBORIS

S. BRULLO\* and G. SPAMPINATO\*\*

\*Dipartimento di Botanica, via A. Longo 19, I-95125 Catania - Italy

\*\* Dipartimento S.T.A.F.A., piazza S. Francesco 4, I-89061 Gallina (RC) - Italy

**ABSTRACT** - A syntaxonomical revision of the hygrophilous woods occurring in marshy places of the flood-plains from SE Europe is given. This vegetation is included in the *Alno-Quercion roboris*, alliance of the *Populetalia albae*, which comprises numerous associations characterized by the dominance of hard-wood trees, such as *Quercus robur*, *Fraxinus oxycarpa*, *Ulmus minor*, *Alnus glutinosa*, etc. For each association the synonyms, nomenclature type, diagnostic species, ecology, structure and chorology are given.

**KEY WORDS** - Phytosociology, syntaxonomy, *Alno-Quercion roboris*.

### INTRODUCTION

In the framework of the project "European Vegetation Survey", the hygrophilous woods linked to a variably prolonged flooded period, are examined. These woods are localized mainly in marshy places of the fluvial bends and mouths as well as in the flood-plains.

The canopy of these woods is characterised by the dominance of hard-wood trees, such as *Quercus robur*, *Alnus glutinosa*, *Fraxinus oxycarpa* (= *F. angustifolia*), *Ulmus minor* or, more rarely, *Ulmus procera* and *Fraxinus pallisae*. Therefore they are floristically and physiognomically well differentiated from the typical riparian woods growing along the riversides submerged during seasonal inundation only, where the canopy is represented mainly by *Salix* sp. pl., *Populus* sp. pl. or sometimes by *Platanus orientalis*.

From the literature data, these hygrophilous woods are mainly distributed in the S-E Europe and in particular they are well represented in Hungary, Albania, Bulgaria, Romania, Yugoslavia, Italy and, more rarely, in France.

The previous authors, which examined these tree communities, referred them to different alliances, as, for instance, *Alnion incanae* (Horvat, 1938), *Alno-Quercion roboris* (Horvat, 1950), *Lauro-Fraxinion oxycarparae* (Kárpáti and Kárpáti, 1961), *Fraxinion angustifoliae* (Pedrotti, 1970; 1984; Pedrotti and Cortini Pedrotti, 1978;

Dierschke, 1984; Gellini *et al.*, 1986), *Populion albae* (Pedrotti and Gafta, 1996), *Alno-Ulmion* (Oberdorfer, 1953; Pedrotti and Gafta, 1996), *Alnion glutinosae* (Pedrotti and Gafta, 1996), *Alno-Padion* (Dierschke, 1984). These different syntaxonomical approaches emphasize the critical phytosociological position of this vegetation.

In the attempt to clarify this problems, a great part of the published relevés have been analysed from the floristic, ecological and structural point of view.

#### MATERIAL AND METHODS

The syntaxonomical analysis was carried out on relevés and synoptic tables taken from various literature sources (Horvat, 1938; Soó, 1957; Simon, 1957; Glavac, 1959, 1968, 1969; Kárpáti & Kárpáti, 1961; Krausch, 1965; Pedrotti, 1970; Horvat *et al.*, 1974; Corbetta & Censoni Zanotti, 1974, 1981; Pedrotti & Cortini, 1978; Piccoli & Gerdol, 1984; Sartori, 1984; Rameau & Schmitt, 1984; Piccoli *et al.*, 1985; Gellini *et al.*, 1986; Gehu & Biondi, 1989; Conti & Pirone, 1992; Pedrotti & Gafta, 1993; Brullo & Spampinato, 1997; Stanisci *et al.* 1998). Some unpublished data have been taken into consideration too. The synthetic table (tab. 1) and the syntaxonomy were constructed according to the principles exposed in Braun-Blanquet's (1964) approach and by following the phytosociological nomenclatural code (Barkman *et al.*, 1986). The nomenclature of species follows Tutin *et al.* (1964-1993).

#### RESULTS AND DISCUSSION

On the basis of literature data and personal field investigations, it was possible to verify that the marsh hard-wood forests show a remarkable autonomy, if compared to the other hygrophilous woodlands. In particular, they are closely related to the boreal alder-carrs belonging to *Alnetea glutinosae*, but they differ clearly from floristical and structural point of view. For its floristic and ecological peculiarities, these woodlands must be included within an independent alliance of the *Populetalia albae*, represented by the *Alno-Quercion roboris*, considered at times by some authors as a suballiance of *Alno-Ulmion* or *Alno-Padion* (Oberdorfer, 1953; Dierschke, 1984).

The *Alno-Quercion roboris* was first described by Horvat (1937) as *nomen nudum* and successively considered by the same author (Horvat, 1938) as synonym of *Alnion incanae* Pawl. 1928. Finally, Horvat (1950) validly described this syntaxon. According to Brullo & Spampinato (1997), all the following syntaxa should be considered as synonyms of the above-mentioned alliance: *Lauro-Fraxinon oxyacarpeae* I. & V. Kárpáti 1961, *Fraxinon angustifoliae* Pedrotti 1970, and *Ulmenion* Oberdorfer 1953.

The diagnostic species of the *Alno-Quercion roboris* are the followings: *Quercus robur*, *Fraxinus oxyacarpa*, *F. pallisae*, *Ulmus minor*, *U. procera*, *Leucojum aestivum*, *Periploca graeca*, *Carex divulsa*, *C. elongata*, *C. brizoides*, *C. strigosa*, *Clematis viticella*, *Cerastium sylvaticum*, *Genista elata*, *Laurus nobilis*, *Moerungia trinervia*. All these species show an important role in this type of vegetation either for their high frequency or because of their exclusiveness.

The *Alno-Quercion roboris*, for its structure and composition, can be included in the *Populetalia albae*, belonging to the class *Querco-Fagetea*, as confirmed by the occurrence of numerous characteristic species of this order, such as *Populus alba*, *P. nigra*, *Alnus glutinosa*, *Salix alba*, *Vitis sylvestris*, *Viburnum opalus*, *Sambucus nigra*, *Ficus carica*, *Carex remota*, *Rumex sanguineus*, *Solanum dulcamara*, *Carex pendula*, *Rubus caesius*, *Arum italicum*, *Equisetum telmateja*, *Scrophularia nodosa*, *Humulus lupulus* etc.

According to the literature data, the associations of the *Alno-Quercion roboris*, as emphasized in fig. 1, 2, occur in Hungary (Horvat *et al.*, 1974), Albania (Kárpáti

& Kárpáti, 1961), Bulgaria (Soó, 1957), Romania (Simon, 1957; 1960; Krausch, 1965), Yugoslavia (Horvat, 1937; 1938; 1950; Horvat *et al.*, 1974; Glavac, 1959; 1968; 1969), France (Rameau & Schmitt, 1984) and Italy (Pedrotti, 1970; Corbetta & Censoni Zanotti, 1974; 1981; Pedrotti & Cortini, 1978; Piccoli & Gerdol, 1984; Piccoli *et al.*, 1985; Gellini *et al.*, 1986; Gehu & Biondi, 1989; Conti & Pirone, 1992; Pedrotti & Gafta, 1993; 1996; Brullo & Spampinato, 1997; Sartori, 1984; Stanisci *et al.* 1998).

The syntaxonomical analysis of hygrophilous woodlands of *Alno-Quercion roboris* allows us to propose the following scheme:

**QUERCO-FAGETEA** Br.BI. & Vlieger in Vlieger 1937, Nederl. Kruidk., Arch. 47: 349.

**Populetalia albae** Br.-Bl. ex Tchou 1948, Vegetatio 1(1): 19.

**Alno-Quercion roboris** Horvat 1950, Inst. Sum. Istraz. Zagreb: 41.

*Alno-Fraxinetum oxycarpae* I. Kárpáti 1962, Mitt. Ostalp.-din. Pflanzenoz.

Arbeit. 2: 102, non Tchou 1948, nom illeg. (art. 31).

Lectotype: rel. 1, tab. pg. 248, I. & V. Kárpáti 1961, hoc loco.

Diagnostic species: *Aristolochia rotunda*, *Ulmus procera*.

Structure and Ecology: Mediterranean hygrophilous forests occurring on inundated soils localised in the inner plains near the rivers, characterized by the prevalence of *Alnus glutinosa*, generally associated to *Fraxinus oxycarpa* and *Populus alba*.

Chorology: Albania (Kárpáti & Kárpáti, 1961; Kárpáti, 1962).

- 10 - *Echinodoro-Fraxinetum oxycarpae*** I. & V. Kárpáti 1961, Acta Bot. Acad. Sci. Hung. 7:244

(sub. *Echinodoro-Fraxinetum angustifoliae*)

Lectotype: rel. 1, tab. 2, I. & V. Kárpáti 1961, hoc loco.

Diagnostic species: *Echinodorus ranunculoides*

Structure and Ecology: Mediterranean marshy forests linked to long time inundate surfaces and characterized by the dominance of *Fraxinus oxycarpa*, which is associated to several herbaceous hydrophytes.

Chorology: Albania (Kárpáti & Kárpáti, 1961).

- 11 - *Junco acuti-Fraxinetum oxycarpae*** I. & V. Kárpáti 1961, Acta Bot. Acad. Sci. Hung. 7:246

(sub. *Junco acuti-Fraxinetum angustifoliae*)

Lectotype: rel. 2, tab. 3, I. & V. Kárpáti 1961, hoc loco.

Diagnostic species: *Agrostis frondosa*, *Cynanchum acutum*, *Juncus acutus*, *Juncus maritimus*, *Agropyron litorale*.

Structure and Ecology: Mediterranean sub-halophilous marshy forests localized in retro-dunal plains on sandy soils, characterized by the dominance of *Fraxinus oxyacarpa* and *Alnus glutinosa* associated to several helophytes.

Chorology: Albania (Kárpáti & Kárpáti, 1961)

**12 - *Fraxinetum pallisae*** Krausch 1965 Limnologica 3(3): 282.

Lectotype: rel. 2, tab. 3, Krausch 1965, hoc loco.

Diagnostic species: *Salix cinerea*, *Loranthus europaeus*, *Fraxinus pallisae*.

Structure and Ecology: marsh forests localized in coastal depression always submerged near to the Danube delta, characterized by the dominance of *Fraxinus pallisae* associated to *Quercus robur*.

Chorology: Romania (Krausch, 1965).

**13 - *Carici remotae-Fraxinetum oxyacarpe*** Pedrotti 1970, Ist. Bot. Univ. Camerino: 12

(sub. *Carici-Fraxinetum angustifoliae*)

Lectotype: ril.1, tab. 2, Pedrotti 1970 (Pedrotti 1992)

Diagnostic species: *Carex remota*

Structure and Ecology: Lowland Mediterranean hygrophilous forests characterized by the dominance of *Fraxinus oxyacarpa* generally associated to *Ulmus minor* or, more rarely, to *Quercus robur*, occurring on muddy soils localized in inland plains near to the rivers and in coastal plain, temporarily inundated during the winter.

Chorology: Italy (Pedrotti, 1970, 1995; Gellini et al., 1986; Pedrotti & Cortini, 1978; Gehu & Biondi, 1989; Arrigoni, 1990; Lucchese & Pignatti, 1990; Conti & Pirone, 1992; Petriccione & Pani, 1992; Pedrotti & Gafta, 1996)

**14 - *Fraxino-Quercetum roboris*** Gellini, Pedrotti & Venanzoni 1986, Doc. Phytosoc. n.s.10(2):35.

Holotype: rel. 14, tab. 3, Gellini, Pedrotti & Venanzoni 1986.

Diagnostic species: *Iris foetidissima*, *Luzula forsterii*, *Moeringia trinervia*, *Veronica montana*.

Structure and Ecology: Hygrophilous Mediterranean forests localized in retro-dunal depressions on hydromorphic soils, occasionally submerged, characterized by the dominance of *Quercus robur* associated to *Fraxinus oxyacarpa* and sometimes to *Ulmus minor* and *Populus alba*.

Chorology: Italy (Padula 1985, Gellini et al 1986, Manzi 1992, Pedrotti & Gafta 1996, Brullo & Spampinato 1997)

**15 - *Hydrocotylo-Alnetum glutinosae*** Gellini, Pedrotti & Venanzoni 1986, Doc.

Phytosoc.n.s. 10(2): 29

Holotype: rel. 26, tab. 1, Gellini, Pedrotti & Venanzoni 1986.

Diagnostic species: *Hydrocotyle vulgaris*, *Thelypteris palustris*.

Structure and Ecology: marsh forests on organic permanently flooded soils localized in coastal depressions among the dunes, characterized by the dominance of *Alnus glutinosa*, generally associated to *Fraxinus oxyacarpa* and to several hydrophytes.

Chorology: Italy (Gellini et al 1986, Arrigoni 1990, Petriccione & Pani 1992, Pedrotti & Gafta 1996)

**16 - *Claudio-Fraxinetum oxycarpeae*** Piccoli, Gerdol & Ferrari ass. nov.

Holotype: rel. 3, tab. 1, Piccoli, Gerdol & Ferrari 1985,

Syn.: *Carici-Fraxinetum angustifoliae* Piccoli & Gerdol 1984, Coll. Phytosoc. 9: 164, non Pedrotti 1970.

*Claudio-Fraxinetum oxycarpeae* Piccoli, Gerdol & Ferrari 1985, Atti Ist. Bot. Lab.

Critt. Univ. Pavia, s.7, 2: 6, nom inval. (art. 5).

Diagnostic species: *Cladium mariscus*, *Carex acutiformis*, *Carex distans*.

Structure and Ecology: Mediterranean marshy forest localized in inter-dunal depressions and coastal lakes on sandy soils flooded for a relatively long time, characterized by the dominance of *Fraxinus oxyacarpa* in the canopy, associated to *Ulmus minor*, *Quercus robur* and *Populus alba*.

Chorology: Italy (Piccoli & Gerdol 1984, Piccoli et al. 1985, Pedrotti 1995, Pedrotti & Gafta 1996, Stanisci et al. 1998)

**17 - *Rubo caesii-Ulmetum minoris*** Brullo & Spampinato ass. nov.

Holotype: rel. 4, tab. 1, Corbetta & Censoni Zanotti 1974, hoc loco.

Syn.: *Carici-Fraxinetum angustifoliae* Corbetta & Censoni Zanotti 1974, Arch.

Bot. Biogeogr. Ital. 50: 165, non Pedrotti 1970.

Diagnostic species: *Rubus caesius*, *Prunus spinosa*.

Structure and Ecology: hygrophilous forests localized in marshy river loops of inner lowlands, with the canopy characterized by *Ulmus minor*, *Quercus robur* and *Fraxinus oxyacarpa*.

Chorology: Italy (Corbetta & Censoni Zanotti 1974, Ferrari & Speranza 1984)

**18 - *Clematido viticellae-Populetum albae*** Brullo & Spampinato 1997, Lazaroa, 18:123.

Holotype: ril.2, tab. 3, Brullo & Spampinato 1997.

Diagnostic species: *Clematis viticella*, *Iris pseudacorus*.

Structure and Ecology: Mediterranean marsh forests occurring on sandy soils in retro-dunal depressions, periodically flooded, dominated by *Populus alba*.

Chorology: Italy (Brullo & Spampinato, 1997)

**19 - *Polygonato multiflori-Quercetum roboris*** Sartori ass. nov.

Holotype: rel. 2, tab.1, Sartori 1984, hoc loco.

Syn.: *Polygonato multiflori-Quercetum roboris* Sartori 1984, Coll. Phytosoc. 9: 204, nom. inval. (art. 5).

Diagnostic species: *Convallaria majalis*, *Polygonatum multiflorum*, *Asparagus tenuifolius*, *Galeopsis pubescens*, *Aristolochia clematis*.

Structure and Ecology: hygrophilous forests localized in muddy soil discontinuously flooded of the river lowlands, characterized by the dominance of *Quercus robur* associated to *Ulmus minor*, *Carpinus betulus*, *Prunus avium* and *Acer campestre*.

Chorology: Italy (Sartori 1984, Corbetta & Zanotti Censoni 1981, Pedrotti & Gafta 1996)

**20 - *Ulmo laevis-Fraxinetum oxycarpeae*** Rameau & Schmitt ass. nov.

Holotype: ril.477, tab.1, Rameau & Schmitt 1984, hoc loco.

Syn.: *Ulmo laevis-Fraxinetum oxycarpeae* Rameau & Schmitt. 1984 Coll. Phyto-soc 9: 97, nom. inval. (art. 5).

Diagnostic species: *Ulmus laevis*, *Fraxinus excelsior*, *Fraxinus excelsior x oxyacarpa*.

Structure and Ecology: hygrophilous forests localized in periodically flooded marshy depressions along the rivers and characterized by *Ulmus laevis*, *Fraxinus oxyacarpa*, *F. excelsior*, and *Quercus robur*.

- Chorology: France (Rameau & Schmitt 1984).
- 21 - *Veronico-Quercetum roboris*** Stanisci, Presti & Blasi 1998, Ecol. Medit. 24: 79  
 Holotype: ril.9, tab. 1, Stanisci *et al.* 1998.  
 Diagnostic species: *Veronica scutellata*, *Juncus conglomeratus*, *Oenanthe aquatica*, *Glyceria fluitans*.  
 Structure and Ecology: marsh forests localized in coastal depressions on hydromorphic sandy soils, periodically flooded, characterised by the dominance of *Quercus robur*, generally associated to *Fraxinus oxyacarpa*. This association comes into contact with the turkey oak woods of *Teucro siculo-Quercetum cerridis*  
 Chorology: Italy (Padula 1985, Stanisci *et al.* 1998).

Number of relevés	21 34 3 6 12 5 16 33 28 5 10 53 6 15 28 39 5 18 1 6 5 1 3 2 3 9 8 4 5 8 17 4 10 9 15 15 14 5 11 10 6 48 39 10 35 15 50 6
Genista siliqua	
Pseudostellaria europaea	
Salix caprea	
Salix aurita	
Carpinus betulus	
Acer campestre	
Helleborus atrorubens	
Smyrnium olusatrum	
Prunus padus	
Oenanthe banatica	
Deschampsia parviflora	
Cardamine dentata	
Tulipium scordium	
Quercus pedunculiflora	
Polygonatum latifolium	
Laurus nobilis	
Rubia tinctoria	
Euonymus latifolia	
Aristolochia rotunda	
Echinodorus ranunculoides	
Agrostis frondosa	
Cynanchum acutum	
Juncus acutus	
Juncus maritimus	
Agropyron lithrae	
Salix cinerea	
Loranthus europaeus	
Iris foetidissima	
Luzula forsteri	
Menyanthes trifolia	
Veronica montana	
Hydrocotyle vulgaris	
Thelypteris palustris	
Cladonia mariscus	
Carex acutiformis	
Carex distans	
Frullania sphagna	
Iris pseudacorus	
Convalaria majalis	
Polygonatum multiflorum	
Galeopsis pubescens	
Asperagis tenifolius	
Aristolochia clematitis	
Ulmus laevis	
Fraxinus excelsior x oxycarpa	
Fraxinus excelsior	
Veronica scutellata	
Juncus conglomeratus	
Oenanthe aquatica	
Glyceria fluitans	

TABLE I - CONT.

<b>Car. All. (ALNO-QUERCION ROBORIS)</b>	
<i>Fraxinus oxycarpa</i>	III V 1 =
<i>Ulmus minor</i>	IV V 1 =
<i>Quercus robur</i>	V V 3 =
<i>Leucojum aestivum</i>	V V 1 =
<i>Carex brizoides</i>	V V 1 =
<i>Pteridoca graeca</i>	V V 1 =
<i>Carex elongata</i>	V V 1 =
<i>Ceratium sylvaticum</i>	V V 1 =
<i>Carex divisa</i>	V V 1 =
<i>Carex strigosa</i>	V V 1 =
<i>Ciamatis vilicella</i>	V V 1 =
<i>Fraxinus pallissae</i>	V V 1 =
<i>Ulmus procera</i>	V V 1 =
<b>Car. Ord. (POPULETALIA ALBÆ)</b>	
<i>Carex remota</i>	V V 1 =
<i>Rumex sanguineus</i>	IV V 1 =
<i>Alnus glutinosa</i>	III V 1 =
<i>Rubus caesius</i>	IV V 1 =
<i>Populus alba</i>	V V 1 =
<i>Vitis sylvestris</i>	III V 1 =
<i>Solanum dulcamara</i>	IV V 1 =
<i>Viburnum opulus</i>	V V 1 =
<i>Carex pendula</i>	IV V 1 =
<i>Arum italicum</i>	V V 1 =
<i>Salix alba</i>	V V 1 =
<i>Sorophularia nodosa</i>	V V 1 =
<i>Sambucus nigra</i>	V V 1 =
<i>Humulus lupulus</i>	V V 1 =
